Congratulations, you have purchased the finest air filter that money can buy. With proper care, this filter can last many seasons. This filter can be used in a stock machine, with no modifications required. If any engine modifications have been made tuning/jetting adjustments may be required. There are special installation instructions, so please follow the procedures outlined below to ensure the K&N® air filter seals properly.

INSTALLATION:

1. Remove the two screws (2008-on models: four screws) on the air box lid. (Fig. 1)
2. Remove the air box lid.
NOTE: It may be necessary to lift up on the stock air filter when removing the air box lid. (Fig. 2)
3. Remove the stock air filter.
4. Remove the stock o-ring in the air box base. (Fig. 3)
NOTE: The o-ring must be removed otherwise the K&N® air filter will not completely seal.
5. Install the K&N® air filter into the air box base making sure it is completely seated. (Fig. 4)
NOTE: The marking "TOP" on the K&N® air filter will be at the top of the air box base.
6. Reinstall the air box lid and tighten the screws.

THESE INSTRUCTIONS MUST BE FOLLOWED EVERY TIME THE FILTER IS RVCED, OTHERWISE THE FILTER MAY NOT SEAL, AND DAMAGE TO THE ENGINE COULD RESULT.
